ANGULAR	★★★⯪☆

Work Experience

Software Engineer

Axa France / Capgemini   2022 - Present

Conducted needs analysis to define project requirements, drafted documentation, and created sub-tasks in JIRA. Actively participated in Agile ceremonies, resolved support tickets, organized technology presentations, and supported team members to drive project success.

Full Stack Developer

It Road –Portnet   2020 - 2022

Collaborated with Product Owners and the development team to define features and user stories. Conducted code reviews for alignment with original visions while serving as a Full Stack Developer and participating in Agile ceremonies, including planning and retrospectives.

Internship

*Procheck – Casablanca*   2019 - 2020

Developed two web applications in Java JEE: a server application that installs on all company servers to collect information about the hard drive, RAM, and CPU, and an agent application that receives this data via sockets.

PROJECTS

Proxy ADIS / Spring Boot / Kafka
AXA, France

Developed a microservice to synchronize client address changes for AXA during relocations, utilizing Apache Kafka for event publishing and response handling, ensuring seamless integration of updated addresses into the BDE system.

RNOCE / Spring Boot / ReactJs
Portnet

Participated in redesigning the National Register, enabling exporters and importers to register with different organizations and track their requests, streamlining the process for better efficiency and user experience.
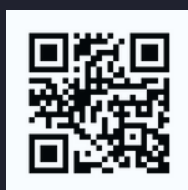

MARINA / Spring Boot / ReactJs
Portnet

Participated in the design and development of an integrated management system for the Kingdom's marinas, to optimize the management processes of recreational ports. Focused on enhancing operational efficiency and improving system workflows to streamline marina management.

AFTRA / Spring Boot / ReactJs
It Road

Contributed to the development of a commercial information portal and data exchange platform for AFTRA, allowing African countries to centralize import/export procedures and share trade data efficiently. Worked on bug resolution, user story implementation, and enhanced both front-end and back-end systems to improve platform functionality and user experience.
